Funding Source: Transportation Enhancement/ARRA funds  
Project Budget: \$3,000,000  
Schedule: Bids Received last week of March 2010  
Project Completion: October 2010

CARMAN's role as Landscape Architects and Engineers was to reveal and emphasize the richly layered landscape of 2nd and Washington. The unifying system for the design concept is the registration of both the frequency of the masculine bridge columns and the juxtaposition of grids expressed in downtown Louisville. This organizing pattern serves as a datum from which objects, spaces and circulation corridors emerge. Moments derived from this datum in the landscape are intended to accommodate a variety of events, users and seasons. Diliberately designed spaces promote opportunities for users to observe, gather, converse, celebrate, contemplate, circulate and relax. The Platform, Lounge Seating, and Bamboo Planters are interventions intended as follies composed to emphasize the playfulness of the urban environment in addition to defining space and circulation.
